MEMO FOR THE RECORD

UFO report: 5 November 1967

Time: 8:00 PM

Duration: 5 minutes

Description: Like first quarter moon  
(Felt it wasn't moon because moon wouldn't be visible?)

Elevation: 20°

<sup>42 miles N</sup>  
Altitude: 12° south of west

Disappeared: Obscured by clouds

Name : [REDACTED]  
[REDACTED]  
Farmersville, Ohio 45325

Comments: Has another report last week. Seems sincere but doesn't really know too much about astronomical bodies.

REPLY TO  
ATTN OF:

TDPT (UFO)

18 January 1968

SUBJECT:

Request for Comments on UFO Observations

TO:

Dr. J. Allen Hynek

1. Reference the attached report from [redacted] of Farmersville, Ohio, on his unidentified observation of 5 November 1967. Mr. [redacted] had sightings on 29-30 October 1967 which were evaluated as possible aircraft. The witness has not provided additional information on his sighting of 5 November. However, we would appreciate your written comments as to the possibility of Mr. [redacted] observing the moon on his latest observation.

[redacted] observation, and comes out to moonset for Farmersville at 20:21 EST. Since the sighting time is given as 20:00, duration 5 min., and the moon had a southern declination,--and the fact that he didn't mention the moon when the nearly quarter moon was plainly there, makes it very likely that the moon was the culprit. The moon, of course, was not 20 degrees in elevation---more like 4-8 degs, but that is normal exaggeration. The moon ~~was~~ also ~~xxxxxxx~~ somewhat farther south than observer indicated his object was, but I do not think this ~~wax~~ is serious. Also, he said he thought it might be the moon, but the "moon wouldn't be visible". Well, it was.

From a Letter  
by J. A. Hynick  
27 Jan 1968

CASE: 5 Nov. 1967 Farmersville, Ohio

corrections

Clearly a case of the moon. When one makes ~~allowances~~ corrections for the longitude of Farmersville west of the 75 th meridian, and corrects for the difference from the meridian of Greenwich, one comes out to moonset for Farmersville at 20:21 EST. Since the sighting time is given as 20:00, duration 5 min., and the moon had a southern declination, --and the fact that he didn't mention the moon when the nearly quarter moon was plainly there, makes it very likely that the moon was the culprit. The moon, of course, was not 20 degrees in elevation---more like 4-8 degs, but that is normal exaggeration. The moon ~~should~~ also ~~have been~~ somewhat farther south than observer indicated his object was, but I do not think this ~~was~~ is serious. Also, he said he thought it might be the moon, but the "moon wouldn't be visible". Well, it was.
